Restriction to one of the following inventions is required under 35 USC 121:

Group I, claims 1-20, drawn to an apparatus for segmenting a plurality of strips of food classified in class 425;

Group II, claims 21-40, drawn to a method of making a multiplicity of segmented rolled food products classified in class 426, subclass 383;

Group III, claims 41-58, drawn to a segmented rolled food item, classified in class 426, subclass 132.

The inventions are distinct each from the other because: the apparatus as claimed in Group I could be used in methods other than that recited in Group II to produce a product other than recited in Group I. For example, the apparatus could be used to product any extrudable, cuttable and embossable inedible product and not just food products. For example, the gel-like, plastic children toys that comes in all different shapes. Also, the product as claimed in Group III could be made by methods other than that recited in Group II. For example, the product of Group III does not require continuous conveying and parallel strips and could be made by hand.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art requiring separate searches as shown by their different classification, restriction for examination purposes as indicated is proper.
